Majority Leader
U.S. Senate
Washington, D.C. 20510

The Honorable Mitch McConnell
Minority Leader
U.S. Senate
Washington, D.C. 20510

The Honorable Nancy Pelosi
Speaker
U.S. House of Representatives
Washington, DC 20515

The Honorable Kevin McCarthy
Minority Leader
U.S. House of Representatives
Washington, DC 20515

Dear Majority Leader Schumer, Speaker Pelosi, and Minority Leaders McConnell and McCarthy:

As Congress undertakes the next iteration of legislation to speed the response to the COVID-19 pandemic, the undersigned organizations urge you to include a significant, long-term investment in public health infrastructure and workforce. This investment is critical to support the public health system to better respond to the COVID-19 pandemic, but also to strengthen it before the next pandemic hits and avoid the loss of life and social and economic disruption we are experiencing today. The pandemic has clearly shown that our federal public health priorities cannot be reached without the critical work of state, local, tribal and territorial health departments. The importance of strong, predictable federal investment in this system is even more vital now as the economic impacts of the pandemic are felt nationwide. State and local governmental budgets, and therefore public health budgets, have already been devastated and are projected to continue to decline.^{1,2} This will leave our nation even more vulnerable to emerging health risks. By building the core public health infrastructure in states, localities, tribal governments and territories, as well as the Centers for Disease Control and Prevention (CDC), the nation will be better prepared for the next threat.

Our groups recommend \$4.5 billion in long-term, additional annual funding for CDC, state, local, tribal and territorial core public health infrastructure to modernize the nation’s public health system, rebuild the workforce, and promote healthier communities.

The COVID-19 pandemic is illustrating in the direst terms the consequences of underfunding public health. The response is personnel-heavy – including rolling out the largest vaccination campaign in U.S. history, investigating cases and conducting contact tracing, managing supplies

and volunteers, conducting risk communications, coordinating with governmental and healthcare partners, and planning for the next phase of response. While short-term funding has been essential, it cannot sustain the workforce or effectively modernize public health. A significant, sustainable investment is needed to support such essential activities as disease surveillance, epidemiology, laboratory capacity, all-hazards preparedness and response; policy development and support; communications; community partnership development; promoting equity; and organizational competencies.

For too long, the nation has neglected basic public health capacity, and the nation's response to the pandemic reflects this chronic underfunding. Since the 2008 recession, state and local health agencies have lost nearly one quarter of the workforce.³ Health departments are still dependent on archaic methods of tracking COVID-19 and other diseases, including phone, fax and paper.⁴ CDC's funding remains just below its level in FY2008, when adjusting for inflation.⁵ Meanwhile, state funding for health departments has dropped by 16 percent per capita, and funding for local health departments has fallen by 18 percent since 2010.⁶ That means there has been little room to modernize, recruit, retain, and retrain the workforce of the 21st Century and address emerging threats. In fact, the estimated gap in achieving a minimum level of public health protection for all communities is about \$13 per person per year, yielding the requested \$4.5 billion.⁷ Despite being a cost-effective method of preventing disease, this starvation of public health has prevented the nation from addressing chronic disease epidemics, surging rates of substance misuse, and health inequities, making many communities particularly vulnerable to COVID-19. It is critical that all Americans can trust that the public health system is strong around them, no matter their zip code.

The U.S. has followed a pattern of underfunding of vital public health services, followed by a crisis, a quick infusion of cash, and then dwindling investments over time.⁸ This pattern is placing American lives at risk. We must think not just of the short-term needs of this pandemic, but the long-term readiness of our nation. We applaud Congress for taking quick action to provide funding for the initial response, including for the state and local public health response.

⁵ In FY 2008, CDC funding was \$6.375 billion (program level). FY 2021 funding is \$7.819 billion (program level). Adjusted for inflation, the 2008 number would be \$7.864 billion in 2020 dollars.

However, short-term, supplemental funding does not allow public health to recruit and retain the expert workforce needed for protecting the nation against emerging threats, such as surging levels of chronic disease, the substance misuse and suicide epidemics, infectious diseases, injuries, natural disasters and environmental hazards. We urge you to act now to prevent and prepare for the next pandemic.

Sincerely,
